

# XO BIOLOGIX-C

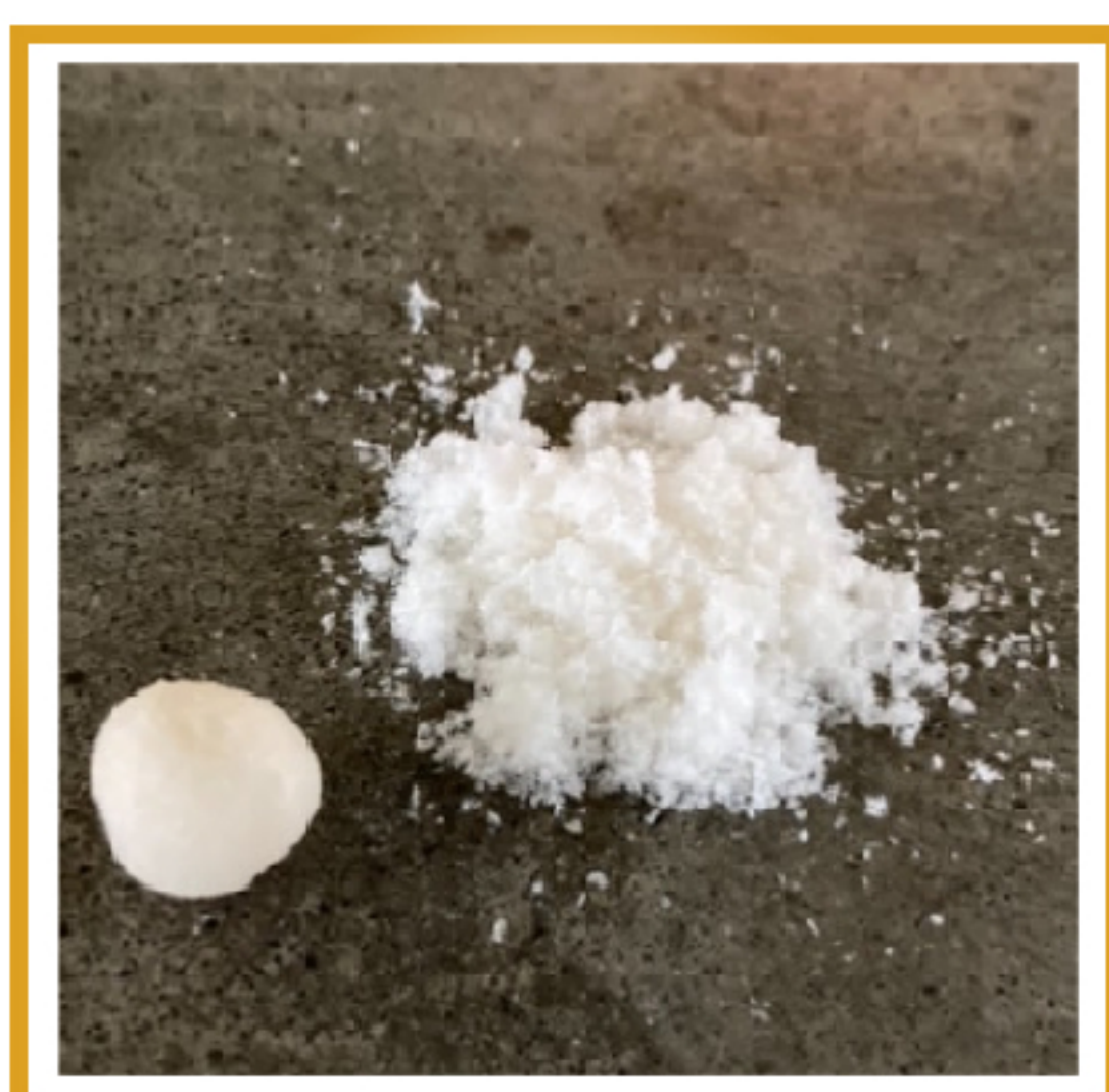

## Topical Collagen Powder Wound Dressing

XO BIOLOGIX-C is an absorbent topical dressing made of a matrix of microfibrillar collagen, indicated for the management of moderate to severe exudating wounds, and for the control of minor hemorrhaging.

XO BIOLOGIX-C helps to create a favorable physiological environment to support wound healing. The XO BIOLOGIX-C formulation preserves the structural and functional characteristics of collagen. Certain products that are on the market, such as denatured collagen or hydrolyzed collagen, have their original molecular structure altered. XO BIOLOGIX-C is made with an absorbent microfibrillar collagen formulation, which assists a favorable physiological environment for wound healing.

XO BIOLOGIX-C is applied directly to the wound, protecting the wound bed and the new delicate tissue.

In addition, because it is derived from microfibrils of collagen, it is an excellent topical application for wounds located in areas where constant range of motion may impact the ability for topical powder to remain intact, or for wounds located in places difficult to reach or awkward to place a sheet topical dressing Period.

### Use as an Adjunct to Surgical Procedures

- Surgical Wounds
- Trauma Wounds
- Diabetic Ulcers
- Partial Thickness Burns
- Pressure Ulcers
- Venous Stasis Ulcers

*Collagen is able to take on the critical role of all stages of wound healing from stopping the flow of blood and inflammation to proliferation and remodeling.*

### Appropriate for Multiple Surgical Specialties

- Orthopedic
- Plastic/Reconstructive
- Sports Medicine
- Trauma
- General
- Vascular
- Obstetric/Gynecology
- Neurologic
- Cardiovascular
- Podiatry
